

Management of Medical Emergencies in the Dental Office A Combined Didactic and Hands-on Skills Course

Emergency topics covered include:

Chest pain including MI, stroke, syncope, allergic reactions, asthma and breathing difficulties, seizures, hypo/hyperglycemia and local anesthetic toxicity.

Discussion of office emergency kits and preparedness.

Hands-on skills practiced include:

Patient assessment and vital signs, oxygen use, airway management and emergency injections.

The optional hands-on afternoon session will include real-life in-office scenarios of emergencies and their management. Apply what you have learned!

Goal: upon completion of the course participants will understand the approach to these emergencies *and* have the necessary skills to manage them in their offices. **NOTE:** The half-day course meets the Provincial Dental Board's criteria for the required CDE emergency course per cycle, including post-test. It also qualifies as the pre-requisite for Dalhousie University's Nitrous Oxide course. This custom designed course is taught entirely by paramedics who manage and teach emergencies routinely!

Course Date: Saturday Apr 26, 2025 @ 8:00 AM - 12:45 PM (2 hrs didactic + 2 hrs hands-on CE + test)

Optional Afternoon Scenarios: 1:30 - 5:00 PM (lunch included + extra 3 1/2 hrs hands-on CE credits)
